

NGUYEN HUU TRUONG

Senior Frontend Engineer

0934 651 033 | truongnhtdev@gmail.com | github.com/delta94 | linkedin.com/in/truongnht
Ho Chi Minh City, Vietnam

Professional Summary

Senior Frontend Engineer with **6+ years** of experience specializing in **TypeScript, React, and Next.js**. Proven expertise in architecting **high-traffic web platforms** serving millions of users with a focus on **SSR/ISR/SSG rendering strategies, Micro-Frontend architecture, and performance optimization**. Deep experience in **enterprise-grade applications** across fintech, telecommunications, and Web3 domains. Strong advocate for **clean architecture, modular design systems, and frontend security best practices** (JWT, XSS prevention, CSP). Passionate about building **scalable, secure, and lightning-fast** web experiences.

Technical Skills

Languages:	TypeScript (primary), JavaScript (ES2024+), HTML5, CSS3/SCSS/SASS
Frameworks:	Next.js (App Router + Pages Router), React 18/19, Remix
State Mgmt:	Redux Toolkit, Zustand, React Query/TanStack Query, Context API
Architecture:	Micro-Frontend (Module Federation), SSR/ISR/SSG, Composable Architecture, Monorepo
UI/Design:	Tailwind CSS, Ant Design, Material UI, Radix UI, Design System development
Testing:	Jest, React Testing Library, Playwright, Cypress, Storybook
Security:	JWT/OAuth 2.0, XSS/CSRF prevention, CSP headers, Content hashing, HTTPS pinning
Performance:	Core Web Vitals optimization, Lighthouse CI, Bundle analysis, Code splitting, Edge caching
Backend Int.:	Next.js API Routes, REST, GraphQL, WebSocket, gRPC-Web
Cloud/DevOps:	GCP (Cloud Run, GKE), Vercel, Docker, GitHub Actions, CI/CD pipelines
Tools:	Turborepo, pnpm, Webpack 5, Vite, Git, Bitbucket, GitLab, Figma/Zeplin

Work Experience

Senior Frontend Engineer — *Singtel (via vendor)* Mar 2023 – Present
Enterprise Telecommunications Platform — Next.js, TypeScript, React, Micro-Frontend

- Architected and led development of **Micro-Frontend infrastructure** using **Module Federation**, enabling independent team deployments across 8+ autonomous squads while maintaining shared design consistency.
- Built and optimized **Next.js 14 applications** with **App Router**, implementing hybrid rendering strategies (**SSR/ISR/SSG**) that reduced **Time-to-First-Byte by 65%** and improved SEO rankings across key pages.
- Designed a **composable design system** (50+ components) with Storybook documentation, adopted by 4 product teams, reducing UI development time by **40%** and ensuring brand consistency.
- Implemented **frontend security layer** including JWT token rotation, XSS sanitization, CSP headers, and secure cookie handling — achieving **zero security incidents** over 12+ months in production.
- Led **Core Web Vitals optimization** initiative: achieved **LCP < 1.2s, FID < 50ms, CLS < 0.05** across all production pages through image optimization, code splitting, and edge caching strategies.
- Established **CI/CD pipelines** with GitHub Actions for automated testing (90%+ coverage), Lighthouse CI performance gates, and preview deployments for every PR.
- Mentored 3 junior engineers through code reviews, pair programming, and weekly tech talks on React patterns, Next.js best practices, and frontend architecture principles.
- Integrated **real-time features** using WebSocket and Server-Sent Events for live dashboard updates serving **5M+ subscribers** with sub-second data refresh.

Frontend Engineer — *YGGSEA (Web3/GameFi)* Sep 2022 – Feb 2023
Asset Management Platform — Next.js, TypeScript, React, Web3

- Developed a **high-performance asset management platform** using **Next.js with SSR/SSG**, serving as the primary interface for game publishers, scholars, and internal stakeholders in the Web3 gaming ecosystem.
- Built **NFT management workflows** (minting, transfer, withdrawal) with seamless Web3 wallet integration, handling **10K+ daily transactions** with real-time status tracking.
- Implemented **performance analytics dashboards** with interactive charts and real-time data feeds, enabling partners to monitor user activity, asset performance, and revenue metrics.
- Optimized **bundle size by 45%** through dynamic imports, tree shaking, and lazy loading strategies, improving initial page load from 4.2s to 1.8s.

Frontend Developer — *Aperia Solutions (Fiserv Client360 project)*

Aug 2021 – Aug 2022

Enterprise SaaS Banking Platform — React, .NET, Azure, MSSQL

- Developed and maintained features for **Fiserv Client360**, a SaaS banking platform (USA market) handling **customer management, risk/compliance, and payment processing** for financial institutions.
- Built and maintained **DLS (Design Language System)** component library, ensuring consistency across multiple product modules and reducing frontend development cycles by **30%**.
- Collaborated with Fiserv backend team to **define API prototypes** and integrate .NET APIs, bridging frontend requirements with complex financial data models.
- Partnered with Business Analysts to translate requirements into technical specifications, delivering features on time across **3 major release cycles**.

Software Engineer — *Thuocsi (BuyMed)*

Aug 2019 – Mar 2021

E-commerce Platform — React, Next.js, Material UI, SCSS

- Built and scaled **thuocsi.vn** e-commerce platform using **React and Next.js**, Vietnam's leading B2B pharmaceutical marketplace serving **thousands of pharmacies** nationwide.
- Architected **reusable component library** based on Material UI with custom theming, reducing project initialization time by **50%** and enabling consistent UI across product lines.
- Designed **scalable CSS architecture** (BEM + SCSS modules) that minimized style conflicts and improved maintainability across a team of 5+ frontend developers.

Key Technical Achievements

Micro-Frontend Platform Architecture

Next.js, Module Federation, Turborepo

- Designed and implemented a production **Micro-Frontend architecture** supporting independent deployments, shared state management, and runtime module loading — enabling **8 teams to ship independently** with zero coordination overhead.

Performance Optimization Framework

Lighthouse CI, Web Vitals, Edge Caching

- Built an automated **performance monitoring pipeline** with Lighthouse CI gates in CI/CD, achieving and maintaining **95+ Lighthouse scores** across all production pages. Implemented ISR with on-demand revalidation for dynamic content.

Enterprise Design System

React, Storybook, Tailwind CSS, Radix UI

- Created a **50+ component design system** with full accessibility (WCAG 2.1 AA), dark mode support, and comprehensive Storybook documentation. Adopted across 4 product teams serving **5M+ end users**.

Education

Ton Duc Thang University — *Ho Chi Minh City*

2013 – 2018

Self-taught Frontend Engineer — Transitioned from Environmental Engineering to Software Development

Continuous Learning & Expertise

- Deep expertise: **Next.js internals** (rendering strategies, middleware, edge runtime), **React 19** (Server Components, Suspense, Transitions)
- Frontend security: **OWASP Top 10** awareness, JWT token management, XSS/CSRF mitigation, Content Security Policy
- Active open-source contributor: github.com/delta94 — React component libraries and frontend tooling
- AI-assisted development: Proficient with **GitHub Copilot**, **Cursor**, **Claude Code** for accelerated engineering workflows
- Continuous learning: Frontend Masters courses, system design study, and internal knowledge-sharing sessions
