| 9/2022 - Now    | <p><b>YGGSEA</b></p> <p>Front end Developer</p> <p>I worked on the asset management system as a third-party offering end to end service for game suppliers onboarding new players friendly and efficiently. Our platform includes a range of features to enhance the onboard new player experience, send NFTs and withdraw NFTs which cooperate with web 3 for seamless management and performance tracking. There are adds-on features such as News, Events Calendar, Quest As a Service and Consulting service to create the resourceful ecosystem for stakeholders. Our stakeholder analysis showed that scholars who play games are particularly invested in managing their assets, and require a platform that is easy to use and navigate. Internal users need a reliable platform to manage assets and monitor user activity, while partners require a platform that provides insights into the performance of their products.</p> <p>Tech-stack: ReactJS, Nextjs</p> |
| 8/2021 - 8/2022 | <p><b>Aperia Solutions</b></p> <p>Front end Developer</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

Fiserv (SaaS Banking), USA - innovation in payments, processing services, risk and compliance, customer and channel management and business insights and optimization

Tech-stack: .Net core, ReactJS, MSSQL, Azure

I joined as a Front end developer to develop and maintain feature for Fiserv Client360 web app project

My daily tasks are as follows:

- Discuss with Fiserv Backend team to define API prototype
- Communicate with BA to understand the task requirement
- Handle UI tasks and mapping response from Fiserv API using .NET
- Maintain DLS (UI library)

---

08/2019 - 03/2021

### **Thuocsi**

Software Engineer

Main responsibilities:

- Develop the thuocsi page
- Building stable and maintainable codebase using React.
- Building react components based on Material-UI to reuse and reduce time when initialize new projects
- Building CSS architecture that makes it easy for developers to reuse, edit, and minimal influence other pages

Technologies:

- ReactJS, ContextAPI, Nextjs framework- Javascript, SCSS, MaterialUI css framework

---

## **EDUCATION**

Jan 2013 - 2018

### **Ton Duc Thang University**

Major: ENVIRONMENTAL ENGINEERING

Academic record retention
